Tortoise Coordinate Transformation on Apparent Horizon of a Dynamical Black Hole

Wenbiao Liu & collaborators

Department of Physics, Institute of Theoretical Physics, Beijing Normal University, Beijing, 100875, China
Abstract

Thinking of Hawking radiation calculation from a Schwarzschild black hole using Damour-Ruffini method, some key requirements of the tortoise coordinate transformation are pointed out. Extending these requirements to a dynamical black hole, a dynamical tortoise coordinate transformation is proposed.
Abstract

Under this new dynamical tortoise coordinate transformation, Hawking radiation from a Vaidya black hole can be got successfully using Damour-Ruffini method. Moreover, we also find that the radiation should be regarded as originating from the apparent horizon rather than the event horizon at least from the viewpoint of the first law of thermodynamics.
Spherically Symmetric Schwarzschild Vacuum Solution of Einstein Equation

\[ ds^2 = -c^2 \left(1 - \frac{2GM}{c^2 r}\right)dt^2 + \left(1 - \frac{2GM}{c^2 r}\right)^{-1}dr^2 + r^2 (d\theta^2 + \sin^2 \theta d\phi^2) \]

\[ r = \frac{2GM}{c^2} \]

The apparent horizon and event horizon are coincident with each other.
(1) $\kappa$ is a constant over the horizon of a stationary black hole

$$dM = \frac{\kappa}{8\pi} dA + \Omega_H dJ$$

(3) $\delta A \geq 0$ in any process

(4) Impossible to achieve $\kappa = 0$ by a physical process
Hawking Radiation

Under quantum theory, Hawking got the black body spectrum in 1974 as

$$N_\omega^2 = \frac{1}{e^{8\pi M\omega} \pm 1} = \frac{1}{e^{\omega/k_B T} \pm 1}$$

Two problems:
(1) Information loss paradox!
(2) Are there any really static or stationary black holes?
Several Intrinsic Contradictions for Black Hole Thermodynamics

- Black hole definition under classical general relativity and that under quantum theory with Hawking radiation
- Purely thermal Hawking radiation with information loss paradox and the unitary condition under quantum theory
- The black hole thermodynamics is deduced from a stationary case, but it is impossible that a black hole is stationary with Hawking radiation

Classical general relativity and quantum theory
A exemplification of the difficulty of quantum gravity

- Damour-Ruffini method

Back-Reaction of Hawking Radiation
Parikh-Wilczek Method

\[ ds^2 = -(1 - \frac{2M}{r})dt^2 + (1 - \frac{2M}{r})^{-1}dr^2 + r^2(\theta^2 + \sin^2 \theta d\phi^2) \]

\[ t = \tau + f(r) \]

\[ dt = d\tau + f'(r)dr \]

\[ (1 - \frac{2M}{r})^{-1} - (1 - \frac{2M}{r})(f'(r))^2 = 1 \]

Under Painleve coordinates, the radial null geodesic equation is

\[ \frac{dr}{d\tau} = \pm 1 - \sqrt{\frac{2M}{r}} \]
Parikh-Wilczek Method

\[ \Gamma \sim \exp(-2 \text{Im} I) \approx \exp(-\beta E) \]

\[ \text{Im} I = \text{Im} \int_{r_i}^{r_f} p_r \, dr = \text{Im} \int_{r_i}^{r_f} \int_0^{p_r} dp_r \, dr \]

\[ \frac{dH}{dp} \bigg|_r = \frac{\partial H}{\partial p} = \frac{dr}{d\tau} \]

\[ \text{Im} I = \text{Im} \int_{r_i}^{r_f} \int_0^H \frac{dH'}{dr} \, dr = -\text{Im} \int_{r_i}^{r_f} \int_0^E \frac{dr \, dE'}{1 - \sqrt{2(M - E')/r}} = 4\pi \int_0^E dE' (M - E') \]

\[ \Gamma \sim \exp(-8\pi ME(1 - \frac{E}{2M})) = \exp(\Delta S) \]
Hamilton-Jacobi Method

\[ g^{\mu\nu} \partial_\mu I \partial_\nu I + m^2 = 0 \]

\[ ds^2 = -\left(1 - \frac{2M}{r}\right)dt^2 + \left(1 - \frac{2M}{r}\right)^{-1}dr^2 + r^2(d\theta^2 + \sin^2 \theta d\phi^2) \]

\[- \frac{1}{2M} \left( \partial_t I \right)^2 + \left(1 - \frac{2M}{r}\right) \left( \partial_r I \right)^2 + \frac{1}{r^2} \left( \partial_\theta I \right)^2 + \frac{1}{r^2 \sin^2 \theta} \left( \partial_\phi I \right)^2 + m^2 = 0 \]

\[ I = -Et + W(r) + J(\theta, \phi) \]

\[ \partial_t I = -E \]
\[ \partial_r I = W'(r) \]
\[ \partial_i I = J_i \]

\[ I = -Et + \int \frac{dr}{2M \left(1 - \frac{2M}{r}\right)} \sqrt{E^2 - \left(1 - \frac{2M}{r}\right)(m^2 + \frac{1}{r^2} J_\theta^2 + \frac{1}{r^2 \sin^2 \theta} J_\phi^2) + J(\theta, \phi)} \]
Hamilton-Jacobi Method

\[ d\sigma^2 = (1 - \frac{2M}{r})^{-1} dr^2 + r^2 (d\theta^2 + \sin^2 \theta d\phi^2) \]

\[ W(\sigma) = \int \frac{d\sigma}{2M} \sqrt{E^2 - (1 - \frac{2M}{r(\sigma)})m^2} \]

\[ \text{Im} I = \text{Im} W = 2\pi r_H E \]

Thinking of the back-reaction, we have

\[ \Gamma \sim \exp(-2 \text{Im} I) = \exp(-8\pi ME(1 - \frac{E}{2M})) = \exp(\Delta S) \]
Damour-Ruffini Method

\[ ds^2 = -(1 - \frac{2M}{r})dt^2 + (1 - \frac{2M}{r})^{-1}dr^2 + r^2 (d\theta^2 + \sin^2 \theta d\phi^2) \]

\[ \frac{1}{\sqrt{-g}} \frac{\partial}{\partial x^\mu} \left( \sqrt{-g} g^{\mu\nu} \frac{\partial \Phi}{\partial x^\nu} \right) - \mu^2 \Phi = 0 \]

\[ [-(1 - \frac{2M}{r})^{-1}r^2 \frac{\partial^2}{\partial t^2} + \frac{\partial}{\partial r} (r^2 - 2Mr) \frac{\partial}{\partial r} + \frac{1}{\sin \theta} \frac{\partial}{\partial \theta} (\sin \theta \frac{\partial}{\partial \theta}) + \frac{1}{\sin^2 \theta} \frac{\partial^2}{\partial \phi^2} - r^2 \mu^2 ] \Phi = 0. \]

\[ [-(1 - \frac{2M}{r})^{-1}r^2 \frac{\partial^2}{\partial t^2} + \frac{\partial}{\partial r} (r^2 - 2Mr) \frac{\partial}{\partial r} - r^2 \mu^2 ] \frac{R_\omega}{r} = -l(l + 1)R_\omega / r \]
Damour-Ruffini Method

Tortoise coordinate

\[ r_* = r + 2M \ln \left( \frac{r - 2M}{2M} \right) \]

\[ dr_* = \left( 1 - \frac{2M}{r} \right)^{-1} dr \]
\[ \frac{d}{dr} = \left( 1 - \frac{2M}{r} \right)^{-1} \frac{d}{dr_*} \]

\[ \frac{d^2}{dr^2} = \left( 1 - \frac{2M}{r} \right)^{-2} \frac{d^2}{dr_*^2} - \frac{2M}{(r - 2M)^2} \frac{d}{dr_*} \]

\[ \left\{ -\frac{\partial^2}{\partial t^2} + \frac{\partial^2}{\partial r_*^2} - \left( 1 - \frac{2M}{r} \right) \left[ \frac{2M}{r^3} + \frac{l(l+1)}{r^2} + \mu^2 \right] \right\} R_\omega (r, t) = 0 \]
Damour-Ruffini Method

\[ r \to +\infty \quad \left\{ -\frac{\partial^2}{\partial t^2} + \frac{\partial^2}{\partial r_*^2} - \mu^2 \right\} R_\omega (r, t) = 0 \]

\[ r \to 2M \quad \left\{ -\frac{\partial^2}{\partial t^2} + \frac{\partial^2}{\partial r_*^2} \right\} R_\omega (r, t) = 0 \]

Particles move near the horizon just like mass-less ones for the infinite observer.

\[ R_{\omega}^{\text{in}} = e^{-i\omega(t+r_*)}, \quad R_{\omega}^{\text{out}} = e^{-i\omega(t-r_*)} \]
Damour-Ruffini Method

Advanced Eddington-Finkelstein coordinate

\[ \nu = t + r_* \]

\[ R_{\omega}^{\text{in}} = e^{-i\omega \nu}, \quad R_{\omega}^{\text{out}} = e^{2i\omega r_*} \cdot e^{-i\omega \nu} \]

\[ R_{\omega}^{\text{out}} = e^{2i\omega r_*} \cdot e^{-i\omega \nu} = e^{2i\omega r} \cdot e^{-i\omega \nu} \cdot \left( \frac{r - 2M}{2M} \right)^{i4M\omega} \]

\[ (r - 2M) \to |r - 2M| e^{-i\pi} = (2M - r) e^{-i\pi} \]
\[ R_{\omega}^{\text{out}} = e^{2i\omega r} \cdot e^{-i\omega} \cdot \left( \frac{2M - r}{2M} \right)^{i4M\omega} \cdot e^{4\pi M\omega} \]

\[ = e^{-i\omega} \cdot e^{4\pi M\omega} \cdot e^{i2\omega \{r + 2M \ln[(2M - r)/(2M)]\}} = e^{4\pi M\omega} \cdot e^{2i\omega r^*} \cdot e^{-i\omega}. \]

\[ \Gamma = \left| \frac{R_{\omega}^{\text{out}} (r > 2M)}{R_{\omega}^{\text{out}} (r < 2M)} \right|^2 = e^{-8\pi M\omega}, \]

\[ \Gamma = \prod_i \Gamma_i = e^{-8\pi \int_0^{\omega} (M - \omega') d\omega'} = e^{-8\pi \omega(M - \omega / 2)} = e^{\Delta S} \]
A Dynamical Vaidya Black Hole

\[
d s^2 = -\left(1 - \frac{2m(v)}{r}\right) dv^2 + 2dvdr + r^2 (d\theta^2 + \sin^2 \theta d\phi^2)
\]

\[
r_{EH} = \frac{2m}{1 - 2\dot{r}_{EH}} \quad r_{AH} = 2m
\]

\[
T = \frac{\kappa}{2\pi k_B} \quad N^2_\omega = \frac{\omega}{e^{\frac{\omega}{k_B T}} \pm 1}
\]

The apparent horizon and event horizon are not coincident with each other any more.
$r_{EH}$  event horizon

$r_{AH}$  apparent horizon

$r_{TLS}$  time-like limit surface

$r_{AH} = r_{TLS} \neq r_{EH}$
Calculating Hawking Radiation via Null Geodesics

\[ ds^2 = -(1 - \frac{2m(v)}{r})dv^2 + 2dvdr + r^2(d\theta^2 + \sin^2 \theta d\varphi^2) \]

\[ \dot{r} \equiv \frac{dr}{dv} = \frac{1}{2} \left(1 - \frac{2m(v)}{r}\right) \]

\[ \text{Im} \ S = \text{Im} \int p_r dr = \text{Im} \iint dp_r dr = \text{Im} \iint \frac{dH}{\dot{r}} dr = \text{Im} \iint \frac{2dr}{2m(v)}(-d\omega') = 4\pi m(v)\omega \]
Calculating Hawking Radiation via Null Geodesics

\[ \Gamma \sim e^{-2 \text{Im} S} = e^{-8\pi m(v)\omega} \]

\[ T = \frac{\kappa}{2\pi} = \frac{1}{8\pi m(v)} \]

\[ S = \pi r_{AH}^2 = 4\pi m^2(v) \]

\[ dm(v) = TdS \]
Calculating Hawking Radiation via Null Geodesics

\[ R = r - \frac{1}{2} \delta \cdot v \]

\[ ds^2 = -(1 - \frac{2m(v)}{r} - \delta)dv^2 + 2dvdR + r^2 (d\theta^2 + \sin^2 \theta d\phi^2) \]

\[ \dot{R} \equiv \frac{dR}{dv} = \frac{1}{2} (1 - \frac{2m(v)}{r} - \delta) \]
Calculating Hawking Radiation via Null Geodesics

\[ \text{Im } S = \text{Im} \int p_R dR = \text{Im} \int \int dp_R dR = \text{Im} \int \int \frac{dH}{\dot{R}} dR \]

\[ = \text{Im} \int_0^\omega \int \frac{2dR}{2m(v)} (-d\omega') = \frac{4\pi m(v)}{(1-\delta)^2} \omega \]

\[ \Gamma \sim e^{-2\text{Im } S} = e^{-\frac{8\pi m(v)}{(1-\delta)^2} \omega} \]
Calculating Hawking Radiation via Null Geodesics

\[ r' = 2m(v)(1 + \delta) \]

\[ T' = \frac{\kappa'}{2\pi} = \frac{1}{8\pi m(v)(1 + \delta)^2} \]

\[ S' = \pi r'^2 = 4\pi m^2(v)(1 + \delta)^2 \]

\[ dm(v) = TdS \]
Calculating Hawking Radiation via Null Geodesics

If $\delta = \dot{r}_{EH}$, the new super-surface under relativistic perturbation $r' = 2m(v)(1+\delta)$ is exactly the event horizon of a Vaidya black hole in the equations’ form.

The event horizon thermodynamics is just one of the perturbations near the apparent horizon. In fact, Hawking radiation can be regarded as coming from the apparent horizon.
Black Hole

\[ U_1 = M \quad T_1 = \frac{1}{8\pi M} \quad S_1 = 4\pi M^2 \]

\[ dU_1 = T_1 dS_1 \]

Black Body

\[ T_2 \quad U_2 = u_2 \cdot V = aT_2^4 \cdot V \]

\[ S_2 = s_2 \cdot V = \frac{4}{3} aT_2^3 \cdot V \quad dU_2 = T_2 dS_2 \]
Black Hole and Black Body

\[ T_1 = T_2 \]

\[ U_1 = U_2 \quad \Rightarrow \quad M = aT_2^4 \cdot V \]

\[ S_1 = S_2 \quad \Rightarrow \quad 4\pi M^2 = \frac{4}{3} aT_2^3 \cdot V \]

\[ 4\pi M = \frac{4}{3} \frac{1}{T_2} \]

incorrect, inconsistent
Black Hole and Black Body

\[ T_1 = T_2 \]

\[ dU_1 = dU_2 \quad \Rightarrow \quad dM = 4aT_2^3 \cdot VdT_2 \]

\[ dS_1 = dS_2 \quad \Rightarrow \quad 8\pi MdM = 4aT_2^2 \cdot VdT_2 \]

\[ 8\pi M = \frac{1}{T_2} \]

correct, consistent!
Black Hole and Black Body

(1) Stationary black holes are not real thermodynamic system, they can not be treated as a usual thermodynamic system directly.

(2) Changing black holes (their quantities are changing) are real thermodynamic system, they can be treated as an ordinary thermodynamic system directly.

The real black hole thermodynamics should be dynamical!!!
Hawking radiation from a stationary black hole

\[ ds^2 = -\left(1 - \frac{2m}{r}\right) dv^2 + 2dvdr + r^2 d\Omega^2 \]

\[ \frac{1}{\sqrt{-g}} \frac{\partial}{\partial x^\mu} (\sqrt{-g}g^{\mu\nu} \frac{\partial}{\partial x^\nu}) \Phi = 0. \]

\[ \Phi = \frac{1}{r} \rho(r, v) Y_{lm}(\theta, \varphi) \]

\[ \left(1 - \frac{2m}{r}\right) \frac{\partial^2 \rho}{\partial r^2} + 2 \frac{\partial^2 \rho}{\partial r \partial v} + \frac{2m}{r^2} \frac{\partial \rho}{\partial r} - \left[ \frac{2m}{r^3} + \frac{l(l + 1)}{r^2} \right] \rho = 0. \]
Hawking radiation from a stationary black hole

tortoise coordinate transformation

\[
\begin{align*}
    r_* &= \frac{1}{2\kappa} \ln \left( \frac{r-r_H}{r_H} \right), \\
    \nu_* &= \nu,
\end{align*}
\]

\[\left[ \frac{r-2m}{2kr(r-r_H)} \right] \frac{\partial^2 \rho}{\partial r_*^2} + 2 \frac{\partial^2 \rho}{\partial r_* \partial \nu_*} + \left[ \frac{2m}{r^2} - \frac{r-2m}{r(r-r_H)} \right] \frac{\partial \rho}{\partial r_*} - 2\kappa (r-r_H) \left[ \frac{2m}{r^2} + \frac{l(l+1)}{r^2} \right] \rho = 0.\]

\[r \to r_H, \quad \kappa = \frac{1}{4m}, \quad r_H = 2m, \quad \frac{\partial^2 \rho}{\partial r_*^2} + 2 \frac{\partial^2 \rho}{\partial r_* \partial \nu_*} = 0\]
Hawking radiation from a stationary black hole

\[ \rho_{\omega}^{\text{out}} = e^{-i\omega(v_+ - 2r_+)} , \quad \rho_{\omega}^{\text{in}} = e^{-i\omega v_+} . \]

\[ \rho_{\omega}^{\text{out}} = e^{-i\omega} \left( \frac{r - r_H}{r_H} \right)^{i4m\omega} , \quad \rho_{\omega}^{\text{in}} = e^{-i\omega v} . \]

Extend the outgoing wave function into the horizon by turning \((- \pi\) ) angle through the negative half complex plane

\[ r - 2m \rightarrow |r - 2m|e^{-i\pi} = (2m - r)e^{-i\pi} \]
Hawking radiation from a stationary black hole

\[ \rho_{\omega}^{\text{out}}(r < 2m) = e^{-i\omega v} e^{4\pi \omega} \left( \frac{2m - r}{2m} \right)^{i4m\omega} \]

\[ \rho_{\omega}^{\text{out}}(r > 2m) = e^{-i\omega v} \left( \frac{r - 2m}{2m} \right)^{i4m\omega} \]

\[ \Gamma = \frac{|\rho_{\omega}^{\text{out}}(r > 2m)|^2}{|\rho_{\omega}^{\text{out}}(r < 2m)|^2} = e^{-8m\pi\omega} \]
Some properties of the tortoise coordinate near the event horizon

\[
\left( \frac{\partial}{\partial v_*} \right)^a = \left( \frac{\partial}{\partial v} \right)^a, \quad \left( \frac{\partial}{\partial r_*} \right)^a = 2\kappa(r - r_H)\left( \frac{\partial}{\partial r} \right)^a.
\]

\[
ds^2 = -\left(1 - \frac{2m}{r}\right)dv_*^2 + 2\kappa(r - r_H)2dv_*dr_* = 2\kappa(r - r_H)\left\{\frac{r - 2m}{2\kappa r (r - r_H)}dv_*^2 + 2dv_*dr_*\right\}.
\]

\[
d\tilde{s}^2 = -\frac{r - 2m}{2\kappa r (r - r_H)}dv_*^2 + 2dv_*dr_*, \quad ds^2 = \Omega^2 d\tilde{s}^2.
\]

\[
d\tilde{s}^2 |_{r \to r_H} = -dv_*^2 + 2dv_*dr_*.
\]
Some properties of the tortoise coordinate near the event horizon

It is obvious that the space time described by the new line element is an asymptotic flat space time near the horizon, which means that Schwarzschild space time is homeomorphic to an asymptotic flat space time near the horizon. Under the condition of near-horizon approximation, the tortoise coordinate transformation has the same quality as the conformal transformation has. The quality of conformal transformation is also a special requirement for the tortoise transformation and it guarantees that the Klein-Gordon equation can be simplified to the standard wave equation near the event horizon.
Dynamical tortoise coordinate transformation

\[
\begin{align*}
\left(\frac{\partial}{\partial v_*}\right)_r = \left(\frac{\partial}{\partial v}\right)_{r \rightarrow r_H(v)}, \\
\left(\frac{\partial}{\partial r_*}\right)_r = 2\kappa(v) (r - r_H(v)) \left(\frac{\partial}{\partial r}\right)^a,
\end{align*}
\]

\[
\begin{align*}
dr_* &= \frac{1}{2\kappa(v)(r-r_H(v))} dr + Q(r, v) dv, \\
v_* &= dv,
\end{align*}
\]

\[
\lim_{r \rightarrow r_H(v)} Q(r, v) = 0
\]
Conformal quality of the dynamical tortoise coordinate transformation

\[ ds^2 = - \left(1 - \frac{2m(v)}{r} \right) dv^2 + 2dvdr. \]

\[ ds^2 = - \left(1 - \frac{2m(v)}{r} \right) dv_*^2 + 2\kappa(v) (r - r_H(v)) \left[ 2dv_*dr_* - 2Q(r, v)dv_*^2 \right] \]

\[ = 2\kappa(v) (r - r_H(v)) \left\{ - \left[ \frac{r - 2m(v)}{2\kappa(v) r (r - r_H(v))} + 2Q(r, v) \right] dv_*^2 + 2dv_*dr_* \right\} \]

\[ d\tilde{s}^2 = - \left[ \frac{r - 2m(v)}{2\kappa(v) r (r - r_H(v))} + 2Q(r, v) \right] dv_*^2 + 2dv_*dr_* . \]
Conformal quality of the dynamical tortoise coordinate transformation

\[ ds^2 = \dot{\Omega}^2 d\tilde{s}^2 \]

\[ \dot{\Omega}^2 = 2\kappa(v)(r - r_H(v)) = e^{2\kappa(v)}(r_* - \frac{1}{2}v_*) \]

\[ d\tilde{s}^2 \big|_{r \to r_H(v)} = -dv_*^2 + 2dv_*dr_* \]
Hawking radiation from a Vaidya black hole

\[
\left(1 - \frac{2m(v)}{r}\right) \frac{\partial^2 \rho}{\partial r^2} + 2 \frac{\partial^2 \rho}{\partial r \partial v} + \frac{2m(v)}{r^2} \frac{\partial \rho}{\partial r} - \left[ \frac{2m(v)}{r^3} + \frac{l(l + 1)}{r^2} \right] \rho = 0
\]

\[
\frac{\partial}{\partial r} = \frac{1}{2\kappa(v)(r - r_H(v))} \frac{\partial}{\partial r_*}, \quad \frac{\partial}{\partial v} = \frac{\partial}{\partial v_*} + Q(r, v) \frac{\partial}{\partial r_*},
\]

\[
\frac{\partial^2}{\partial r^2} = \left[ \frac{1}{2\kappa(v)(r - r_H(v))} \right]^2 \frac{\partial^2}{\partial r_*^2} - \frac{1}{2\kappa(v)(r - r_H(v))^2} \frac{\partial}{\partial r_*},
\]

\[
\frac{\partial^2}{\partial r \partial v} = \frac{1}{2\kappa(v)(r - r_H(v))} \left[ \frac{\partial^2}{\partial r_* \partial v_*} + Q(r, v) \frac{\partial^2}{\partial r_*^2} \right] + \left[ \frac{r_H(v)}{2\kappa(v)(r - r_H(v))^2} - \frac{\kappa(v)}{2\kappa^2(v)(r - r_H(v))} \right] \frac{\partial}{\partial r_*}.
\]
Hawking radiation from a Vaidya black hole

\[ A \frac{\partial^2 \rho}{\partial r_*^2} + 2 \frac{\partial^2 \rho}{\partial r_* \partial v_*} + B \frac{\partial \rho}{\partial r_*} - C \rho = 0 \]

\[ A = \frac{r - 2m(v)}{2\kappa(v) r (r - r_H(v))} + 2Q(r, v), \]
\[ B = \frac{2r_H(v)}{r - r_H(v)} - \frac{2\kappa(v)}{\kappa(v)} + \frac{2m(v)}{r^2} - \frac{1}{r - r_H(v)} \frac{r - 2m(v)}{r}, \]
\[ C = 2\kappa(v) (r - r_H(v)) \left[ \frac{2m(v)}{r^3} + \frac{l(l + 1)}{r^2} \right]. \]
Hawking radiation from a Vaidya black hole

Near the apparent horizon the radial equation can be written as

\[
\frac{\partial^2 \rho}{\partial r_*^2} + 2 \frac{\partial^2 \rho}{\partial r_* \partial v_*} + 2 \kappa(v_*) \frac{\partial \rho}{\partial r_*} = 0.
\]

\[
\rho_{\omega}^{\text{out}} = e^{-i \omega(v_* - 2r_*) + L(v_*)}, \quad \rho_{\omega}^{\text{in}} = e^{-i \omega v_* + L(v_*)}.
\]

\[
L(v_*) = - \int_0^{v_*} \kappa(v_*) \, dv_*
\]
Hawking radiation from a Vaidya black hole

The radiating particles are assumed to tunnel through the horizon in a null radial geodesic

\[ \frac{dr}{dv} \bigg|_{r=r_H(v)} = \frac{r_H(v) - 2m(v)}{2r_H(v)} \]

\[ r_* = \frac{1}{2\kappa(v)} \ln \left( \frac{r - r_H(v)}{r_H(v)} \right) + \frac{1}{2} v, \quad v_* = v. \]
Hawking radiation from a Vaidya black hole

\[ \rho^\text{out}_\omega(r > 2m(\nu)) = e^{\frac{i \omega}{\kappa(\nu)}} \ln\left( \frac{r-r_{H}(\nu)}{\frac{r_{H}(\nu)}{r_{H}(\nu)}} \right) + L(\nu) \]

\[ \rho^\text{out}_\omega(r < 2m(\nu)) = e^{\frac{\omega \pi}{\kappa(\nu)}} \cdot e^{\frac{i \omega}{\kappa(\nu)}} \ln\left( \frac{r_{H}(\nu)-r}{\frac{r_{H}(\nu)}{r_{H}(\nu)}} \right) + L(\nu) \]

\[ \Gamma = \frac{|\rho^\text{out}_\omega(r > 2m(\nu))|^2}{|\rho^\text{out}_\omega(r < 2m(\nu))|^2} = e^{-2\pi \omega / \kappa(\nu)} \]

\[ T = \frac{\kappa(\nu)}{2\pi} = \frac{1}{8\pi m(\nu)} \]
Thanks

Welcome the questions!
